**Re: Clam Bayou/Dinkins Bayou Restoration Project (culverts);  
36-0233299-001**

**Dear Pamela,**

**Attached is the \$100 application processing fee for the General Permit for this important environmental restoration project. Also a revised signature page with the revised signatures of the South Florida Water Management District and the City of Sanibel as property owner is enclosed. The project was approved by the South Florida Water Management District Governing Board at a noticed public hearing on November 12, 2003. The minutes of that meeting, with approval of this project, titled: "Dinkins Bayou Restoration" on page 30 of 31, is also attached.**

**The specific conditions of the general permit including a stipulation that the project not significantly impede navigation and that all erodible ground areas and slopes disturbed by construction be revegetated with sod, mulch, seed or wetland species or otherwise appropriately stabilized within 72 hours following completion will be scrupulously adhered to.**

**Thanks for all your help with this environmental restoration project. If you need any additional information, please do not hesitate to contact me at #472-3700.**

**Sincerely,**

**Robert K. Loffin, Ph.D.  
Natural Resources Director**
